

Chidvilash Yeccharla

+1 669-240-3410 | yeccharla.c@northeastern.edu | linkedin.com/in/chidvilash | github.com/chidvilash333

EDUCATION

Northeastern University

Master of Science in Artificial Intelligence (Expected Dec 2027)

Silicon Valley, CA

Jan 2026 – Present

Vellore Institute of Technology – AP

B.Tech in Electronics and Communication Engineering (Minor: AI/ML)

Amaravati, India

Jun 2021 – Jul 2025

- GPA: 3.41 / 4.00 (Top 15% of cohort)

EXPERIENCE

Machine Learning Intern

Sep 2023 – Nov 2023

ACMEGRADE

Remote

- Built a cancer prediction classifier using Random Forest and Gradient Boosting on 50K+ patient records, achieving 92% accuracy — outperforming single-model baseline by 11%.
- Engineered a real-time face detection pipeline with OpenCV and Haar Cascades, reducing inference latency by 30% (120ms → 84ms) to meet production SLA requirements.

Research Intern

Sep 2024 – Nov 2024

VIT-AP University

Amaravati, India

- Applied Lemur Optimization Algorithm with ensemble classifiers (KNN, Decision Tree, SVM) to improve disease diagnosis accuracy by 8% over baseline.
- Designed automated preprocessing pipelines for medical tabular data, reducing model training time by 20%.

PROJECTS

Production-Grade RAG System (Ask My Docs)

2026

Python, LangChain/LangGraph, ChromaDB, BM25, Sentence Transformers, RAGAS | github.com/chidvilash333

- Built a production RAG system for domain-specific QA with grounded, citation-based responses.
- Implemented hybrid retrieval (BM25 + vector search) with cross-encoder reranking for improved relevance.
- Developed ingestion pipeline for PDFs, markdown, and web data with chunking and embedding storage in ChromaDB.
- Created RAGAS-based evaluation pipeline with a golden dataset to measure faithfulness and ensure response reliability.

Emotion-Responsive AI System for Education

May 2025

Python, OpenCV, SVM, Raspberry Pi | github.com/chidvilash333

- Trained an SVM classifier on FER-2013 (35,887 images) for 7-class emotion recognition using HOG feature extraction and grid-search tuning; integrated GPT-based AI to adapt educational content in real time.
- Deployed a multimodal camera-microphone-speaker pipeline on Raspberry Pi 4 with end-to-end latency under 500ms.

Lemur-Based Disease Diagnosis System

Sep – Nov 2024

Python, scikit-learn, Ensemble Learning | github.com/chidvilash333

- Implemented Lemur Optimization Algorithm for automated ensemble model selection across KNN, Decision Tree, and SVM, improving disease classification accuracy by 10% over baseline.

TECHNICAL SKILLS

Languages: Python, SQL, Bash

ML / DL: PyTorch, TensorFlow, scikit-learn, XGBoost, HuggingFace Transformers

NLP & LLMs: BERT, GPT APIs, Prompt Engineering, RAG, Speech-to-Text

Computer Vision: OpenCV, CNN, Transfer Learning, Object Detection

Tools & Platforms: Git, Docker, FastAPI, React, NumPy, Pandas, Google Colab, Raspberry Pi
